Phases of the moon worksheet pdf free

As an Amazon Associate I earn from qualifying purchases. These free printable phases of the moon worksheets include moon phases cards, oreo phases of the moon, colouring pages and more! Do your kids ever ask you what the moon is made of? Where it goes at night? Or how it can be different shapes? Chances are, if they've shown an interest in space, they've asked you about the moon. And that's okay! The moon is a fascinating topic for kids (and adults!) of all ages. That's why I am sharing some fun and educational printables that will help kids learn more about the moon. We've included printable worksheets, coloring pages, and even a fun oreo phases of the moon worksheet so you can follow the phases of the moon with your child. These activities are perfect for parents and educators who want to teach children about astronomy. Learning about the moon is a fun way to explore space! Did you know that the moon goes through different phases? These phases are caused by the earth's position relative to the sun and moon. The moon has always been an object of fascination and speculation. For centuries, people have looked to the moon for guidance and as a source of wonder. This blog post provides worksheets and activities for learning about the phases of the moon. These resources are perfect for parents and educators who want to help students appreciate this natural phenomenon. ★WHAT YOU GET.....9 page PDF file including the following: 3 Pages of moon phase cards2 Moon tracker worksheetsOreo phases of the moon worksheet3 Moon themed colouring pages ★ ★ You can download all 9 pages for FREE at the end of the article. ★ ★ I've included 3 sheets of moon phase cards. You can use these cards that show the phases of the moon to teach the names of each phase. You can also have your kids put the moon phases in order. All the various phases of the moon are included from new moon to waxing gibbous moon and full moon to waning crescent moon and more. It's a great way to help kids equate the phase of the moon with the different shapes of the moon. They can visually see from the cards that what appears to be half of the moon is actually called a waning quarter. Use the moon tracker to have kids look at the moon each night and draw what the moon looks like. Creating moon logs with this tracker is a great way to engage kids and get them interested in the night sky! Print out enough for a year and let kids keep them in a binder or paper folder as a moon observation journal! This free printable worksheet should help kids see that the different phases of the moon move in a pattern as our planet moves around the solar system. Oreo cookies are perfect for this lesson. It's a great way to learn about the moon phases. Kids will absolutely love this interactive activity! You will need: An Oreo cookie for each moon phaseA Popsicle stick or other tool for scraping the frostingThe free printable sheets including this sheet and the moon phase cards (link below) You need to separate the Oreo cookies while keeping the frosting intact. The best way is to slowly twist the Oreo apart. Most of the frosting, if not all should be on one side. Use the moon cards as reference to recreate each phase in cookies and frosting. Yum! I've also included 3 different outer space colouring pages for kids. Looking for More Free Educational Printables for Kids? Writing a report on animals can be fun and educational with this free printable animal report template! Perfect for grade school students! Download this Free Printable Clouds Activity Sheets Set for a fun and engaging learning experience for kids. Download these free printable marshmallow and toothpick 3D shape worksheets as a fun educational activity that teaches kids geometry. Celebrate the legacy of Martin Luther King, Jr. with these free MLK worksheets for kids! Includes word searches, writing prompts, and more. Books for Kids About the Moon You can also pick up some fun but educational books about the moon to read with your kids to pair with these worksheets and activities! I've listed a few books below that I think can make teaching and learning about the moon even more fun and effective. These books cover topics like attributes and phases of the moon, moon landings, etc... Moonshot: The Flight of Apollo 11 by Brian Floca (Preschool to Grade 2) Simply told, grandly shown, here is the flight of Apollo 11. Here for a new generation of readers and explorers are the steady astronauts, clicking themselves into gloves and helmets, strapping themselves into sideways seats. Here are their great machines in all their detail and monumentality, the ROAR of rockets, and the silence of the Moon. Here is a story of adventure and discovery—a story of leaving and returning during the summer of 1969, and a story of home, seen whole, from far away. The Moon Seems to Change by Franklin Branley (Preschool to Grade 3) This clear and appealing science book for early elementary age kids, both at home and in the classroom, introduces basic information about the moon. The Moon Book by Gail Gibbons (Preschool to Grade 3) Shining light on all kinds of fascinating facts about our moon, this simple, introductory book includes information on how the moon affects the oceans' tides, why the same side of the moon always faces earth, why we have eclipses, and more. It also includes a map of the moon's surface! One Giant Leap by Robert Burleigh & Mike Wimmer (Grades 1 – 3) On July 20, 1969, Neil Armstrong became the first person in history to set foot on the moon. As he did so, he uttered his famous declaration: "That's one small step for man, one giant leap for mankind." But how did he and Buzz Aldrin reach the moon? What was their journey like? In this gorgeously illustrated book, readers join the crew of Apollo 11 as they race into space and reach incredible new heights. Faces of the Moon by Bob Crelin and Leslie Evans (Grades 1 -4) Why does the Moon seem to change shape from night to night? What's really going on up there in the sky? Innovative die-cuts and playful poetry introduce the names and shapes of the lunar phases to explain the role light and shadow play in this transformation. The Moon by Seymour Simon (Grades 2 – 6) From Apollo 11's first landing to the mystery of moonquakes and the genesis of craters, this stunning introduction to our nearest neighbor in space describes the moon and its all-important relationship to Earth. Mesmerizing full-color photography and an informative text perfect this exciting and educational journey in space. Affiliate links may have been used in this post. FREE offers are often time-sensitive and may be limited time only. There have been some of the most amazing night skies this summer with so many planets visible. It's been wonderful to star gaze and marvel at God's creation. My kids have always loved looking at the moon since they were little toddlers, wanting to see it peek out of the clouds, and light up the sky. Teach your kids all about the moon with these free printables and unit studies on the moon. Also, explore the different phases of the moon and facts about the moon for kids. Learning about Earth's Moon If your children are fascinated with the night sky they will love to learn about the moon with these printables and unit studies. We love doing unit studies in our homeschool. You can pair this unit study with a family night of stargazing on a brightly lit full moon night! Free Moon Printables and Unit Studies: Montessori Inspired Moon Printables - Your kids will love free printable phases of the moon cut and paste activity worksheets, coloring pages, and card booklets. Moon Phases Mini Book - This moon phase printable you can make into a mini book! There's also links for constellations and more about the solar system. Phases of the Moon Worksheets and Printables - These fun worksheets will teach your kids the names of each moon phase and come with pages to track the time and date of the phases. Montessori Moon Cutting Strips - Great scissor cutting skill practice and fun activity for toddlers with these pretty moon cutting strips. Solar System: Moon Unit Study - Kids will love the DIY telescope science project. Moon Printables - This link has fun art projects for kids like making moon rocks and painting moon phases with a trick to thicken the paint for texture for the moons. Moon Phases Nature Study Printable Pack - Download fun free moon phase nature unit studies. Moon Phases Worksheets - In addition to moon phase worksheets, kids will also learn about the alignment of the sun, moon, and earth, how they all work together to produce tides. Oreo Cookie Phases of the Moon Activity with Printable Activity Guide - This is a fun, hands-on activity kids will love because they get to eat Oreos while learning about the different phases of the moon. Be sure to scroll to the bottom of this post to gain access to our free Phases of the Moon Unit Study. Free Facts About Earth's Moon Free Facts About Earth's Moon Research Journal - Exciting worksheets for kids about the moon with illustration, questions, and answering key. Phases of the Moon Printables Printable Phases of the Moon Yatzee type of game - Free PDF download for educational Yatzee card game about the phases of the moon, fun and easy enough for the whole family to play and learn together. Phases of the Moon Printable Flip Book - Make your own cute little moon phase flip book with this free printable. Moon Observation Journal - What a cool idea to keep a moon observation journal to record nightly and notice as changes go by. Moon Tracker and Moon Printables - These super kid friendly phases of the moon printable worksheets offer coloring pages, cut and paste activities, labeling, and notebooking to get the most out of learning all about the moon. PDF MOON FACTS DOWNLOAD: Facts About Earth's Moon Phases of the Moon As students gaze at the moon every night, they will see how it doesn't quite look the same each time. The phases of the moon are the different ways the moon looks from the Earth throughout the month. The Moon Never Actually Changes Shapes Although students may be intrigued about the different shapes the moon has, they will be even more shocked to know that the moon doesn't change shapes at all. The Moon Doesn't Shine Light Another interesting fact about the moon is that it doesn't shine light the way the sun shines light. Sunlight is the only source of light in our solar system. The "moonlight" that we see is, in fact, the sun's light reflecting off the moon's surface. The moon doesn't have its own light, even though it looks like it does. When the moon orbits around the Earth, the side of the moon facing the sun is lit. The phases of the moon are the different shapes we see as the moon-lit portion from Earth. Northern Hemisphere and Southern Hemisphere Half of the moon is always lit by the sun. That is hard to comprehend for many. People in the Northern Hemisphere and Southern Hemisphere see the lunar phases differently from one another, from different angles. It depends on where you are in the world. Basically, the moon phases are controlled by the positions of the moon itself, earth, and sun. Lunar Calendar Each of the eight phases of the moon completes its lunar cycle every 29.53 days, so each moon cycle repeats once every 29.53 days. This time period is known as a lunar month. Since a lunar month is shorter than the standard calendar month, modern societies no longer use it. However, many ancient societies measured their time in lunar months or "moons" including Chinese, Babylonians, Greeks, and Jews civilizations. 8 Primary Phases of the Moon: NOTE: When the moon looks to be growing or getting larger it is called "waxing." When it gets smaller it's called "waning." The first phases of the moon are known to be waxing and the last phases are considered to be waning. New Moon Phase This new moon is the first lunar phase and is when the moon seems to completely disappear. It is completely facing the moon and is not illuminated. The new moon rises as the sun rises. Waxing Crescent Moon Phase This moon phase is in the Northern Hemisphere. It's when the moon starts to show some as it starts its orbit. While in the sky, the moon looks like tiny silver light. This type of phase can be seen every evening for a few minutes after the sun sets. First Quarter (Half Moon) Phase In this phase, half of the moon is visible for the first half of the evening and comes a week after the new moon. In the first quarter, the moon is illuminated halfway, and which half depends on where you are in the Earth. Waxing Gibbous Moon Phase Starting right after the First Quarter, the illumination is about 50%. The gibbous phase is named after the moon's shapes it is less than the full moon but bigger than the Third Quarter. Full Moon Phase The Full Moon is when the Moon and Sun are aligned on the exact opposite side of the Earth. 100% of the Moon's face is lit up by the Sun. Since the moon is in constant motion around the Earth, it never really stays a full moon for long. Waning Gibbous Moon Phase Following the Full Moon, the moon starts waning or decreasing to the Waning Gibbous Phase. The illumination of sunlight from this phase is anywhere from 99.9% to 50.1%; and this happens from one day to the next. Third Quarter Moon Phase This phase is also called the Last Quarter Moon Phase and is a half moon. The last quarter phase is in the waning period of the moon phases. Waning Crescent Phase The waning crescent moon looks like a thin light on the left in the Northern Hemisphere. The lunar disk isn't visible to the unaided eye but can be seen because of the stars behind it. Some sources sat there is another phase of the moon called the Dark Moon. Yet, the New Moon and Dark Moon are virtually identical and happen simultaneously. More Facts on Moon Phases There is so much more to learn about moon phases. For instance, once every 3 years, there is a second full moon in one calendar month called a Blue Moon. There is a time when the moon moves exceptionally close to Earth and looks about 7% to 15% larger, this is called a Super Pink Moon. Then there is a Sturgeon Moon, Worm Moon, or Hunter's Moon. You kids will find them fun to learn about. A moon phase is an angle of the moon to the Earth that appears different to us every day. Now, when our family gazes at the night sky a little bit in the course of the month, there is so much for your family to think about. Once children learn about moon phases, they can wonder if they are looking at the back end of the moon or front. They can understand how the moon has no light, yet the sun's reflection on the moon lights up the sky even in the darkest of nights. Use the resource below to help teach your students about the moon phases at home. Phases of the Moon Unit Study PDF Download Use this Moon Phases Unit Study as a soft introduction to teach your kids about the primary moon phases. This printable pack comes with information cards, nomenclature flashcards, poems, paper for copying poems and taking other notes, and more!
